SAMPLE PREPARATION AND METHOD/PROCEDURE:

The experiment has been performed on blanched BSF Larvae to speed up the drying rate. For this experimental run, given sample has been placed in microwave transparent tray with 15 mm thickness of layer for drying with suitable setting parameters. Also, initial moisture content before drying, final moisture content after drying has been taken.

OBSRVATIONS:

The Drying behavior of BSF Larvae has been investigated under the Batch Microwave+Convection Heating System. The drying rate is found to be increasing with respect to increasing drying time. It has been found that the moisture content on the dry basis (%) decreases with respect to increase drying time. As per physical investigation, it has been observed that there is no colour change in sample with required final moisture content.
